

1. The first group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a mobile app. The factors were listed in a table, and respondents were asked to rank them in order of importance. The factors were: ease of use, reliability, security, privacy, and cost. The results showed that ease of use was the most important factor for all respondents, followed by reliability, security, privacy, and cost.

2. The second group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a mobile app. The factors were listed in a table, and respondents were asked to rank them in order of importance. The factors were: ease of use, reliability, security, privacy, and cost. The results showed that ease of use was the most important factor for all respondents, followed by reliability, security, privacy, and cost.

3. The third group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a mobile app. The factors were listed in a table, and respondents were asked to rank them in order of importance. The factors were: ease of use, reliability, security, privacy, and cost. The results showed that ease of use was the most important factor for all respondents, followed by reliability, security, privacy, and cost.

4. The fourth group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a mobile app. The factors were listed in a table, and respondents were asked to rank them in order of importance. The factors were: ease of use, reliability, security, privacy, and cost. The results showed that ease of use was the most important factor for all respondents, followed by reliability, security, privacy, and cost.

5. The fifth group of respondents (n = 10) was asked to identify the most important factors influencing their decision to use a mobile app. The factors were listed in a table, and respondents were asked to rank them in order of importance. The factors were: ease of use, reliability, security, privacy, and cost. The results showed that ease of use was the most important factor for all respondents, followed by reliability, security, privacy, and cost.
